## STUDENT EXIT FEEDBACK FOR THE SESSION 2021-22

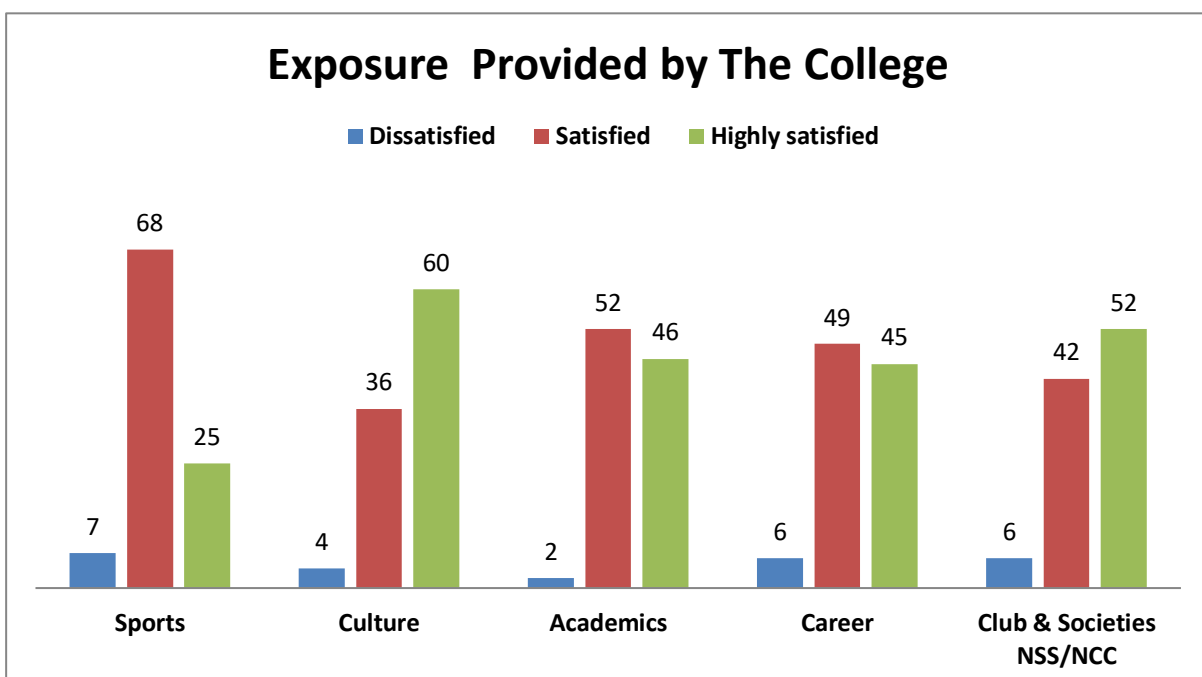

A Student Exit Feedback was conducted wherein feedback was sought from the final year students hailing from Arts, Commerce and Science stream on the basis of sixteen parameters. The students' exit feedback assessed the institution's strength and weakness on the scale of Highly Satisfied, Satisfied and Dissatisfied. There were a hundred respondents in the survey.

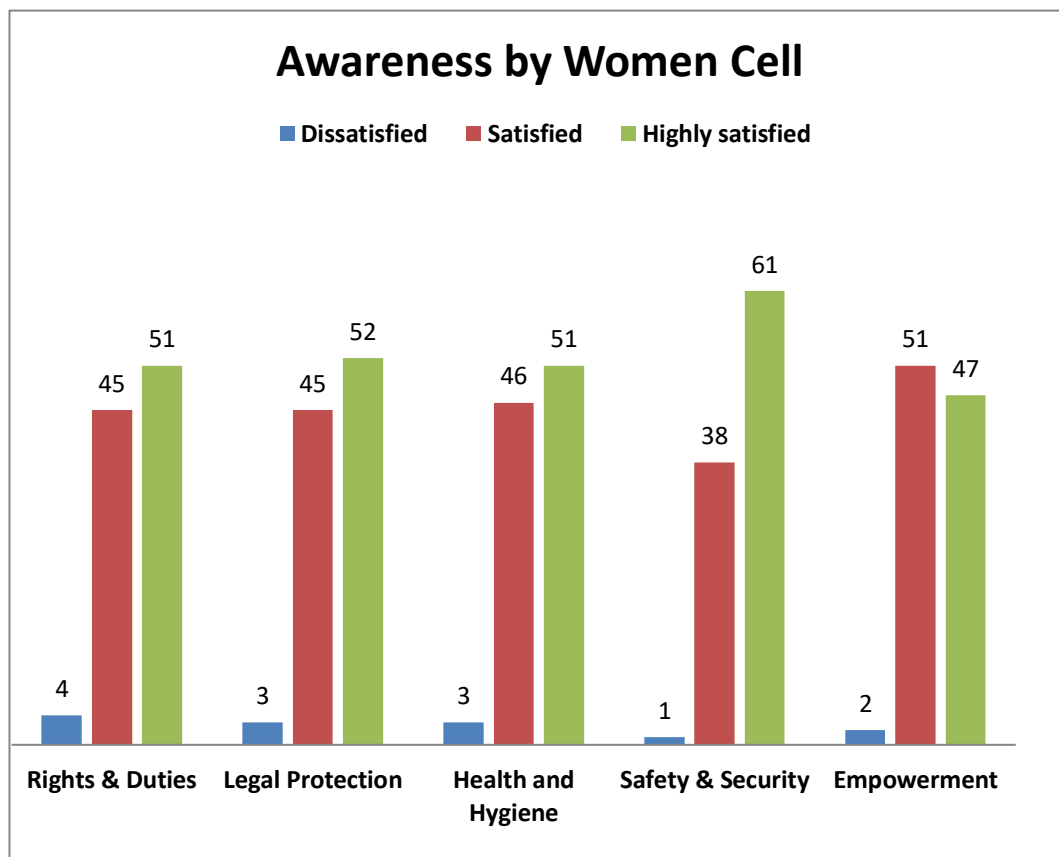

The feedback was insightful as far as the students' viewpoint regarding the college is concerned. The findings of the study present that in the overall development from the day of joining the institution to the day of leaving it 46 percent students' response was that they were satisfied whereas 50 percents' response was highly satisfied. This variation can be understood in the light of students engaging in comparative analysis of RKMV with other eminent institutions. Harsh climate, difficulty in finding comfortable accommodation, traffic congestion, and distance from the comfort of their hometowns are various contributing factors. In the evaluation of the overall academic experience in the college 61 percent students were highly satisfied which is the result of well qualified faculty members, regular classes, balanced timetable, involvement in cultural and co-curricular activities, participation in sports, ICT enabled smart classrooms etc.

In respect of rating teachers on the basis of teaching capabilities, 65 percent students were highly satisfied whereas 30 percent responded satisfied and 5 percent were dissatisfied. Similarly, in support and helpfulness rendered by the teachers to students, 51 percent respondents responded in being highly satisfied, 45 percent were satisfied whereas 4 percent responded in dissatisfaction. In both these parameters multiple factors played a role. Frequent transfers of the teachers, discomfort of the students in language of learning which is distinct from their mother tongue, hesitation in divulging inner thoughts, all these result in less interaction and engagement of the students with their teachers. RKMV being the only girl's college which amount to greater sense of safety, security and comfort for the girl students is working hard to better itself.

In exposure provided by the college in the field of sports, 25 percent responded in being highly satisfied, 68 percent students responded in being satisfied and 7 percent showed dissatisfaction. The difference can be attributed to the college not having a large playground and insufficient courts for the students to practice. In exposure to culture 60 percent responded in being highly satisfied and 36 percent students responded in being satisfied. Being a renowned college in Himachal Pradesh RKMV attracts students from remote corners of the state as well as from outside the state too. The girl students hail from different background and take time to open up and participate in various cultural events. Keeping such tendencies in mind the college offers innumerable events, activities and opportunities for the girls to come out of their comfort zone and engage in challenging work. In academic exposure 46 percent responded in being highly satisfied, 52 percent students responded in being satisfied and 2 percent showed dissatisfaction. The reason is the poor and delayed examinations result. In exposure provided by the college in the field of career 45 percent responded in being highly satisfied, 49 percent students responded in being satisfied and 6 percent showed dissatisfaction. The college being a government institution promotes the girl students in academics and career but have few campus placements and job opportunities. In exposure by different clubs and societies like NSS and NCC 52 percent responded in being highly satisfied, 42 percent students responded in being satisfied. Although the college regularly strives to ensure equal participation of all the students in some cases limited seats result in dampening the spirit.

Women Cell of the college has bolstered the girls in dissemination of knowledge, independent thinking, providing of safe and secure environment and empowerment. These claims can be judged with the respondents answer that in providing awareness of rights and duties only 4 percent showed dissatisfaction while an equal percentage of 51 respondents showed high satisfaction and 45 being satisfied. Similarly, in legal protection, Health and Hygiene, Safety and security, and empowerment the students' response was overtly affirmative. Thus, confirming that the college has been successful in preparing the students for stepping forth in the society and facing the competitive world.

In grievance redressal and solving of the students' problems 47 percent responded in being highly satisfied, 53 percent students responded in being satisfied. Largely, the grievances of the students are related to internal assessment and their final results. At the College level these issues are urgently taken up and addressed quickly but inconvenience is caused while traversing between the university and college thus generating such grievances.

### Physical facilities of the college

■ Dissatisfied   ■ Satisfied   ■ Highly satisfied

The physical facilities of the college have resulted in 58 percent respondents being satisfied whereas 42 percent respondents as being highly satisfied. Constraint of space has been a leading factor in the overall less than high satisfaction response. This factor plays due to less space in the playground, library, laboratories and toilet as well. These factors have also been included by students in their suggestions apart from requirement of parking space, college buses and weak internet network.
